DETAILED ACTION

Claims 1-26 are pending in the application.

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 2, drawn to a screening method to identify compounds that affect uncoupling, classified in class 435, subclass 7.1.
 - II. Claim 3, drawn to method for detecting a human OGC variant having uncoupling activity, classified in class 435, subclass 70.1+.
 - III. Claims 4-15, drawn to a method for modulating the metabolic rate in a mammal by altering OGC expression, classified in class 435, subclass 455.
 - IV. Claims 16-26, drawn to a method for decreasing mitochondrial membrane potential in a cell by increasing expression of OGC, classified in class 514, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions I-IV are patentably distinct methods that involve different reagents, different method steps (i.e. different functions), and have different results (i.e. different effects). For instance, Invention I involves testing any compound for the ability to affect uncoupling by altering OGC expression (not necessarily in vivo); Invention II involves the testing human OGC variants for

Application/Control Number: 09/888,264

Art Unit: 1635

uncoupling activity using nucleic acids encoding human OGC variants (none of the other Groups uses OGC variants, not necessarily in vivo), Invention III involves altering metabolic rate in a mammal (i.e. either increasing or decreasing metabolic rate in vivo), Invention IV involves a method of decreasing mitochondrial membrane potential in a cell by increasing expression of OGC.

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are distinct for the reasons given above and the search required for each Group is not co-extensive with the search required for the other Groups because the searches requires different search terms, restriction for examination purposes as indicated is proper. For example, the search for Group I encompasses searching for any compound that can affect uncoupling; the search for Group II encompasses searching OGC variants; the search for Group III encompasses searching metabolic rate in a mammal by altering OGC expression; and the search for Group IV encompasses searching for decreasing mitochondrial membrane potential by increasing expression of OGC.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Eric Angell whose telephone number is (703) 605-1165. The examiner can normally be reached on M-F (8:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John L. LeGuyader can be reached on (703) 308-0447. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4242 for regular communications and (703) 308-4242 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.

J. Eric Angell, Ph.D. April 1, 2002
